SUMMARY

Full stack engineer building production web apps in React, Next.js and TypeScript, along with the Node.js services behind them — REST APIs, BullMQ job queues and scheduled jobs. Currently at Antino, embedded with a client's engineering team, where I also set up the team's Claude Code and Figma MCP workflow. I like owning a feature end to end, from UI to API.

EXPERIENCE

Antino | Software Engineer

Nov 2025 – Present

Embedded on-site with a client team across three concurrent React, Next.js and TypeScript projects.

- Improved a map-heavy React/Next.js feature by caching map-data requests and reworking its loading states, cutting redundant API calls and improving rendering performance.
- Built event-driven background processing in a Node.js service with BullMQ and scheduled cron jobs, running large file downloads off the main request path so other work isn't interrupted; also optimized its REST API performance.
- Set up a shared Claude Code workflow: a CLAUDE.md with our structure, naming, library and accessibility rules, and custom commands (/new-component scaffolds a component with types, tests and Storybook; /review checks a diff for ally issues, unused code and missing tests). Two teammates use it regularly, and review back-and-forth dropped.
- Configured the Figma MCP server so Claude reads a frame's structure, spacing and design tokens and generates components that use our token names instead of hardcoded values, reducing pixel-fix rounds with designers.

Appvin Technologies | Software Engineer

Jan 2025 – Nov 2025

Worked on GoTrust, the company's data privacy product.

- Owned frontend features end to end, building GoTrust's React/TypeScript dashboards with Redux and React Query.
- Cut GoTrust's page load time from 4.2s to 1.6s with code-splitting and lazy loading (Lighthouse score 58 – 92).
- Reviewed code and mentored junior developers and interns.

Sarvh | Software Engineer (Part-time)

Jan 2024 – Jan 2025

Fashion e-commerce brand; part-time alongside my B.Tech.

- Built the brand's e-commerce website in React and JavaScript, with the core storefront features a fashion store needs.
- Integrated a virtual try-on feature into the storefront.

PROJECTS

DevHub | Knowledge hub for saved links, with AI search and chat

[GitHub](#)

- Full-stack app (NestJS, Prisma, PostgreSQL, React) for saving links: the API scrapes each page with Playwright, gets a Zod-validated summary and tags from gpt-4o-mini (re-prompted once on failure), and embeds the chunks in pgvector.
- Built an "Ask AI" chat streamed over SSE, using OpenAI tool calling (search, list, summarize, save a link) with Zod-checked tool arguments; retrieval returns the top 5 chunks by cosine similarity, and answers cite the saved pages.
- Added JWT auth with per-user ownership checks, an SSRF guard that re-validates every URL the headless browser requests, per-route rate limits, and Jest unit tests for auth, resources and chat tools.

DevLens | Developer dashboard for GitHub

[GitHub](#)

- Full-stack app (React, TypeScript, Node.js/Express, PostgreSQL/Prisma) with a webhook-driven sync that ingests GitHub events and surfaces repository and contributor metrics; deployed on Vercel and Railway.

SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Redux, React Query, Tailwind CSS

Backend & data: Node.js, NestJS, Express, REST APIs, BullMQ, Redis, cron jobs, PostgreSQL, pgvector, Prisma

Testing & deployment: Jest, React Testing Library, Docker, Vercel, Railway

AI & LLMs: OpenAI API (tool calling, structured outputs, embeddings), RAG, Zod, Claude Code, Figma MCP

EDUCATION & CERTIFICATIONS

B.Tech | Bennett University, Greater Noida

2021 – 2025

OpenAI Technical Practitioner | OpenAI

Sep 2026

OpenAI Foundational Knowledge | OpenAI

Sep 2026
